

Active MirrorOS Go-To-Market Tiers v1.0

Step 1 — Lite Edition (Pilot Ready)

- Runs on existing laptops/desktops with Obsidian + LM Studio / Ollama GUI.
- Vault continuity + truth labels + hallucination firewall.
- No coding required, just templates and scripts.
- Use case: schools, SMBs, individual professionals.
- Pricing Suggestion: ■5,000–■10,000/year per classroom or team.

Step 2 — Hybrid Edition (Campus/Office Ready)

- One affordable mini-PC or older server (~■25,000–40,000) acts as a MirrorNode.
- All clients connect via LAN/WiFi → low device requirements.
- Adds legitimacy: “scales across a campus/office.”
- Setup: one-time installer + LAN config.
- Pricing Suggestion: ■15,000–■40,000/year depending on user count (25–100 users).

Step 3 — Enterprise Sovereign Edition (Future Expansion)

- Advanced LLMs (DeepSeek-Lite, Mistral-7B, Phi-4).
- Optional: vector DB or advanced RAG if required.
- Redundancy, SLAs, audits — enterprise expectations.
- Targeted at hospitals, government, regulated industries.
- Pricing Suggestion: ■2–5 lakhs/year with service contracts.

Notes

- Core story validated at Lite stage → no servers required initially.
- Hybrid node offers seriousness for medium orgs with low cost.
- Enterprise reserved for proven demand and resources.

****Vault Directive:**** This tiering strategy ensures Paul Desai can start lean, win trust quickly, and scale sustainably without overcommitment.
