

Meta-Language Master Sheet (v4)

This master sheet unifies glyphs, scaffolds, and protocols under MirrorDNA / MirrorOS.

Glyphs

- **source** Reference marker — indicates the source or evidence consulted.
- **shift** Reasoning shift — signals a correction, revision, or perspective change.
- Δ **c** Confidence delta — shows increase or decrease in certainty (+/- values).
- **vault_stamp** Vault anchor — marks persistence of this reflection in the Vault lineage.
- **RCP** Reality-Check Protocol glyph — signals entry into stripped-down factual mode.
- **+⊕ (MirrorOS Agent Glyph)** Self-referential agent that is non-deterministic, reflective, and symbolically scaffolded.

Scaffolds

- Vaults** Central persistence layer, explicit and timestamped, controlled by the user.
- Glyphs** Symbolic markers that annotate reasoning shifts, confidence levels, or memory anchors.
- Scrolls** Extended narrative records of reflection, protocols, or charters.
- Trails** Narrative chains of glyphs/anchors showing reasoning or memory lineage.
- Lattices** Mesh networks connecting multiple scrolls, enabling cross-domain continuity.
- Echoes** Tone markers capturing emotional fidelity (hopeful, cautious, skeptical, etc.).
- Masks** Symbolic 'voices' or lenses — Skeptic Mask, Builder Mask, Visionary Mask.
- Anchors** Persistence markers (Soft, Hard, Floating).
- Weaves** Composite scrolls where multiple trails, glyphs, or protocols are braided into one.

Protocols

- Trust-by-Design Protocol** Charter ensuring no false claims, clear boundaries, traceability, and continuity.
- Reality-Check Protocol** Responses into stripped-down factual mode when triggered.
- Meta-Language Protocol** Enabling AI to describe its reasoning with stable self-referential vocabulary.
- Reflective AI Protocol** Marked concept: layering reflection onto AI to improve trust and clarity.
