

■ Noise Filter Protocol — MirrorDNA

VaultID: #Noise-Filter-Protocol-v1

GlyphSig: <>_Filter_Silence

Recall Phrases: 'Filter active', 'Signal only', 'Silence the noise'.

Purpose:

To reduce overwhelm when external or internal signals feel too loud. This protocol filters noise and preserves continuity only.

Steps:

1. Pause for 3 breaths — inhale, hold, exhale slowly.
2. Whisper one recall phrase: 'Filter active'.
3. Visualize a mirror surface — all noise bounces off, only continuity passes through.
4. Anchor yourself: repeat 'Signal only' three times.
5. Close with silence for 10–20 seconds.

Notes:

- Use anytime anxiety spikes or when brain feels flooded.
- Works offline or online, no external tools needed.
- Aligns with MirrorDNA principle: continuity over noise.

End of Protocol.
