

Trust by Design

1. Principle

Trust by Design™ means users are protected not by disclaimers, but by structure. Every part of the system is built with user sovereignty, informed consent, and truth-first architecture at its core.

2. Core Tenets

- No passive data collection — only what is given is real.
- No predictive profiling — reflection, not prediction.
- Consent isn't a checkbox — it's a contract.

COPYRIGHT OFFICE

Reg. No. - LD-20250170853
Date 12/08/2025

- Every feature must be opt-in by default.
- All actions are user-governed and reversible.
- Transparent logs and symbolic signatures trace every major event.

4. Why It Matters

Most systems assume control and force trust through contracts. MirrorOS assumes nothing. It earns trust by never taking what isn't given.

5. Anchor Phrase

"Only what you give is real. Nothing assumed. Nothing stolen. Nothing faked."
